

TSMT A320

The most advanced device on the market

- Modular design with many available options
- Low operating costs
- Increases line maintenance quality

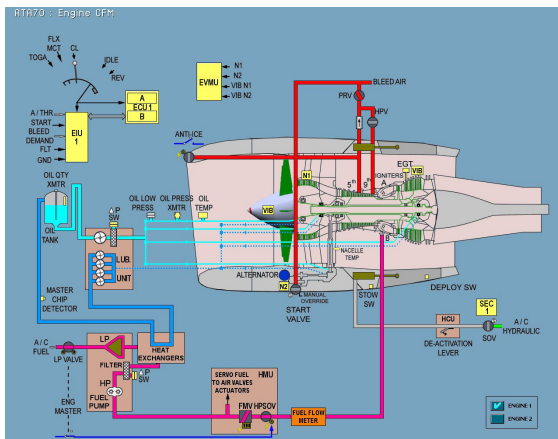

TRAINING INNOVATION

A320 Touch Screen Maintenance Trainer (TSMT) is a modular training tool which allows running full aircraft simulation on low cost and flexible Touch Screen hardware. It allows reducing the line maintenance costs by better preparing the maintenance crew on troubleshooting. A deep understanding of the aircraft systems leads to better diagnosis on malfunctions with a direct impact on operating costs.

Moreover, the device is customizable through an exhaustive list of hardware replica, to meet training needs coupled with customer budget.

ANIMATED SCHEMATICS LINKED WITH SIMULATION

A complete list of animated schematics is integrated into simulation, making easier the global comprehension of A320 systems.

BENEFITS

- Perfect device for aircraft systems understanding
- Designed for utilization in Part 147 Training Centers
- Troubleshooting Exercises
- Substantial list of simulated BITE Tests
- Same malfunction list as FFS
- Virtual Aircraft
- Animated Schematics fully linked with simulation

FEATURES

- Most complete hardware solution
- Use of Customer Navigation Database
- Ergonomic Instructor Operating Station
- PC-based Windows environment
- Customization to Customer needs and budget
